

Bookify Documentation

User Manual

Upon first entering the website, the user sees the Bookify homepage. Select the “Get Booking” button to get started.

If the user already has an account, they can select “Login” from the navigation bar and they will be directed to the login page.

Bookify

Sign Up | **Login**

If the user does not have an account, selecting “Sign Up” or “Get Booking” will direct them to the sign up page. The user can then create an account with their username and password. This account can then later be used on the login page.

Upon clicking “Sign Up” or “Login”, the user will be taken to their dashboard where they can create a new vacation or view, edit, or delete their previously created vacations.

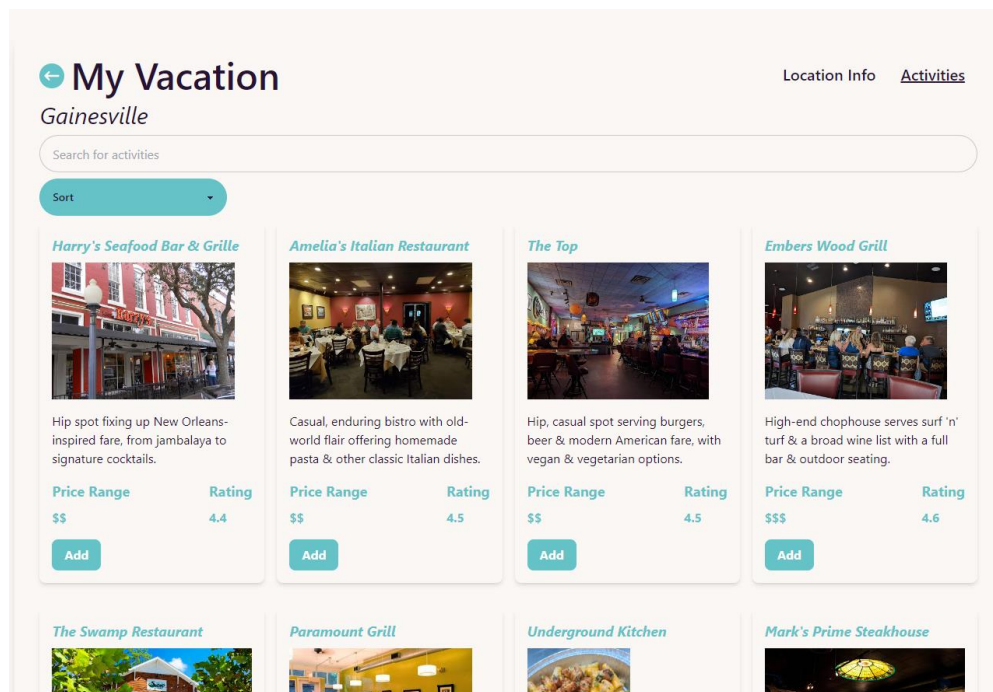

Selecting the “Add Vacation” button will direct the user to the add vacation page where they can name their new vacation and select its location.

Selecting “Add Vacation” will direct the user to the location info page of their vacation. This page can also be reached by selecting “View Vacation” for a vacation on the dashboard. On this page, the user will see an image and brief description of the location, along with any activities they selected for the vacation. The user can also navigate back to their dashboard by selecting the blue back arrow.

Selecting the “Activities” tab will direct the user to the activities page where they can see a list of different activities such as restaurants, museums, and other attractions. These activities include an image, description, price, and rating to help the user decide which activities they may want to include in their vacation. The user can also use the dropdown menu to sort the activities by rating. Additionally, the search bar allows the user to search for specific activities to add to their vacation. The user can select the “Add” button for any activity that they want to add to their vacation, and it will appear on the “Location Info” tab for their vacation.

The navigation bar can be used at any time to direct the user to the homepage or dashboard, as well as log the user out.
